2019-2020

Front-End Development

procodrr - Anurag Singh (Online)
2024-2026

Projects

Developed 10+ frontend projects using JavaScript, React & React Native.

- Built an application using React Native and Expo. Implemented navigation, authentication (Clerk & Appwrite), API integration, dynamic routing, and modern UI/UX features, including dark mode and loading states.
- Built Single Page Applications (SPA) with dynamic routing using React Router
- Integrated REST APIs (e.g., REST Countries API) for dynamic data rendering
- Developed CRUD applications to manage and manipulate data efficiently with a drag-and-drop feature
- Built config-driven UI components to dynamically render content based on configuration data
- Implemented breadcrumb navigation for improved UI/UX
- Added pagination and infinite scrolling for better data handling and performance
- Used localStorage for data persistence (e.g., theme management)
- Implemented form validation for better user input handling
- Applied conditional rendering for dynamic UI updates
- Optimized performance using lazy loading and code splitting

Experience

Digit Insurance

Technical SEO Associate 2022 - Present

- Worked with Adobe Experience Manager (AEM) CMS to manage and optimize web content
- Collaborated closely with frontend and CMS developers to create the components for the website
- Reviewed and tested development changes, providing final approval before pull requests were raised
- Developed UI improvements using HTML, CSS, and JavaScript, enhancing user experience
- Implemented and validated structured data (schema markup) in collaboration with developers at the component level to improve search engine visibility and rich results
- Bridged the gap between SEO requirements and frontend implementation by working directly with development teams.
